Myth: Digital Evidence is Easily Manipulated

- Reality: Strict forensic protocols, hashing, and an unbroken chain of custody protect evidence integrity.
- Result: Properly collected evidence is admissible in court and nearly impossible to tamper with undetected.

Myth: Deleted Data is Gone Forever

- Reality: Most "deleted" files leave traces on devices.
- Forensic experts use specialized tools to recover and analyze this data, making "deletion" far from permanent.

Myth: Digital Forensics is Only for Police

- Reality: Corporates, banks, law firms, and cybercrime units all rely on digital forensics.
- From insider threats to fraud investigations, its applications go far beyond law enforcement.

Myth: Only Hackers or Tools Solve Cases

- Reality: Digital forensics is a skill-based science.
- Anyone with strong fundamentals, curiosity, and ethics can excel—tools are only as good as the expert operating them.
